To Whom It May Concern,

I am pleased to provide this letter of recommendation for Louis Rosche, whom I have gotten to know as a 6th grade science teacher. As a 6th grade science teacher Louis has effectively contributed to student learning and faculty collaboration and demonstrated empathy, technical expertise and creativity.

As a teacher, Louis consistently applies strategies that support student learning and foster academic growth. For example, when working with students facing language barriers, Louis collaborated with ELL specialists to modify instructional materials and integrate visual and hands-on learning techniques. This approach enhanced student engagement and comprehension. Louis' empathy brings a lens of critical thinking to situations, considering from multiple perspectives.

As a team player, Louis has efficiently worked with team teachers to collect and use data to monitor student progress using a variety of technology. Louis demonstrates a talent and affinity for collecting and organizing data using innovative technology tools and systems, specifically within Educlimber as the team MTSS coordinator. In class, Louis thinks outside of the box to leverage artificial intelligence tools and uses sheets to collect and organize student data for instructional decisions.

Additionally, Louis has demonstrated collaboration and creative thinking in the 6th grade science professional learning community where the teachers partner to plan rich instruction and reflect on student growth. Together they've designed 3-dimensional lessons, incorporating scientific practices that address cross-cutting concepts and disciplinary core ideas. An example of this is designing a project where students chose a topic learned first semester and wrote a picture book for a pre-school audience. Teachers coordinated a visit to our neighbor early childhood pre-school where students had the chance to read their books. This lesson reinforced scientific principles while promoting creativity and collaboration and is one example of many creative and engaging lessons.

I recommend Louis Rosche for future opportunities. Louis' instructional skills and strategies, analytical approach, and creative thinking are an asset to any organization.

Sincerely,

*Melissa Nussbaum*
